

Xerox iGen 150 Press

Redefined productivity.
So you can redefine profitability.

Now every hour can be more profitable, with fewer trade-offs.

One hour. It's a unit for measuring time.

Isn't it? Usually, yes. But in today's business world, it's also a unit of measure for productivity — and ultimately, success. Every hour of every day is a race against the competition, a contest for more customers and an opportunity to expand your business — if you have the right solutions.

The Xerox iGen 150 Press redefines an hour as one of your most effective tools for business growth, eliminating the trade-off between quality and profit that printers have had to make for years.

The press brings together more easily attained and maintained image quality, more raw speed and more advanced automation so every hour becomes a tool for building a stronger business.

Stronger through delighted customers.

Impress your customers with outstanding image quality and you've taken a big step toward gaining valuable loyalty. iGen 150 takes your business to unprecedented levels.

Stronger through greater job capabilities – including offset transfer.

Through a powerful mix of capabilities, iGen 150 is uniquely able to produce a wider range of jobs. Say yes to short turnarounds. Match the colour from a job produced months ago. Offer a greater variety of stocks. And generally knock your customers' socks off.

Stronger through reduced costs.

iGen 150 reduces your operational costs in a number of ways. You are able to print customer-ready output more quickly than ever, with substantially less time, adjustment and waste. There's only so much time. Now more of it is profitable time.

Stronger through continuous improvement.

iGen 150 is the culmination of over ten years of study, innovation and collaboration with our customers. Virtually every aspect has been examined to enhance quality, increase productivity and eliminate costs so that you can quickly grow your business into something larger, nimbler and more capable in a challenging marketplace.

What happens in one hour?

The world is one of different cultures, customs and currencies. But there are certain things that are universal. Everywhere, an hour is the measure of time.

Every hour:

- Lightning strikes the earth 21,600 times.
- 12,671 computers are sold.
- More than 6,100 people are born.
- There are 360 million Google searches.
- 5,936 cars are produced around the world — as are 2,283,100 paper clips.
- Business is fueled as we consume more than 93,000,000 cups of coffee.

And even with all of those remarkable facts, an hour just got more productive. iGen 150 has taken everything that can happen in 60 minutes and multiplied it, to make the productivity you can achieve in an hour — every hour — eye opening.

You might think of image quality and productivity separately. iGen 150 thinks differently.

Over the years, there has been one constant in the market — a universal expectation from your customers that the colour you produce will match their unique requirements, every time. And for years, you had to choose to either deliver that quality or focus on productivity.

With iGen 150, you can have both. Achieving outstanding image quality is faster than ever, thanks to a redesigned imaging system that takes setup time, waste and guesswork out of your day.

It starts with a strategy that builds powerful colour management technologies right into the press.

Xerox Confident Colour is a collection of the finest colour management technologies, designed and refined to deliver more outstanding colour and more saleable output. These built-in technologies are supported by Xerox's unique consultation, customisation and business development services so you can be sure you are ready to meet — or exceed — the expectations of your customers. Confident Colour allows you to emulate a range of industry standards such as GRACoL and Fogra and adhere to Pantone standards so you can accurately match colours, from job to job, shift to shift and from press to press.

Now digital can pay off the ultimate compliment.

Xerox Matte Dry Ink has been developed to take advantage of the growing opportunity for digital print with an appearance almost identical to offset. The combination of Matte Dry Ink and the imaging system design makes the iGen 150 Press a perfect complement to your existing offset business.

You can produce new applications that integrate seamlessly into your existing offset workflow.

Matte Dry Ink truly expands the power of iGen 150 and your ability to succeed in some of the most exciting and fastest growing markets in our industry. The results are dramatic...not only in the output you see on every sheet, but the impact you see on the most important sheet of all — the balance sheet.

Predictable output, page to page, day to day, machine to machine and city to city.

With iGen 150, customers can be confident coming to you again and again. It's easier than ever with the automated Colour Maintenance Tool, in conjunction with the Inline Spectrophotometer which takes the manual intervention out of the calibration process and delivers outstanding colour the first time. This automated process analyses a mix of target colours and notifies the operator the press is ready for production — eliminating unnecessary maintenance procedures and increasing uptime.

And the Auto Density Control System works in tandem, detecting and correcting streaks before they occur. You get consistent quality on every image, every day.

Rethink image quality, right down to the smallest detail.

iGen 150 image quality approaches that of offset printing and meets your customers' expectations for quality from the first print, delivering on the promise of true graphic communications quality and performance.

iGen 150 uses a new 2400 x 2400 imaging system with Vertical Cavity Surface-Emitting Laser (VCSEL) technology to deliver more information per square inch. That means improved detail, tighter, more uniform rosettes and better sharpness.

Together with other advancements, the image quality of iGen 150 means more happy customers and more business growth.

“We want to make sure that when we purchase our machine we have quality that's going to be consistent. That when we run one job today, the next time they come in the job will look very, very similar to what we ran last time.”

John Cassidy

President

Duplicates Ink —

Print and Communications

Like a Swiss watch.

A

Feeder module

Feeder module (up to six), two paper trays each; load while run; up to 30,000-sheet capacity.

B

Cut-sheet format

Largest digital cut-sheet format, up to 364 x 660 mm.

C

Gripperless transport

Gripperless transport mechanism allows printing to within 1 mm of sheet edge and enhances feeding reliability across a range of coated and uncoated paper stock.

D

Dry ink containers

Easy-to-load, high-capacity dry ink containers; replace while run.

E

Matte dry ink

A dry ink formulation developed to take advantage of a tremendous opportunity in the photo market by optimising the uniformity of gloss appearance across highlights, midtones, and shadows. Ideal on any application demanding a pleasing matte finish, particularly those on uncoated or silk stocks.

F

New image path

A new 2-D VCSEL (Vertical Cavity Self Emitting Laser) 2400 x 2400 Image System enables more data per inch.

G

Auto Carrier Dispense

This new method of combining dry ink and carrier yields consistent colour uniformity from the first print to the last and from job to job. With Auto Carrier Dispense, operators no longer have to stop the machine and change the developer, resulting in greater machine availability and productivity.

H

Auto Density Control

Every press, be it digital or litho, can be susceptible to density variations and streaks. iGen 150 Auto Density Control is patented technology designed to detect streaks in output before they occur and fix them without operator intervention. The system automatically measures the image density for a series of test patches from the top and bottom of the page. If it detects a difference, it digitally compensates for any inconsistencies — ensuring consistent image density across the page.

Swiss watches have the reputation for being the finest technology and the best way to accurately measure time. It is an apt metaphor for iGen 150.

The best technology and design make iGen 150 the standard against which all other digital print solutions will be judged. And it is the standard for measuring productivity and profit. Every hour. Every shift. Every day, as your business grows stronger.

I

Automated Image on Paper Setup

With the new iGen 150 Automated Image-on-Paper technology, manual setups are replaced with a predictable, automated routine — eliminating costly and time-consuming image fit setups.

J

Single-point transfer

Single-point image transfer to paper with speeds up to 9,000 (150 prints per minute) impressions per hour.*

*4 colour simplex

K

Intelligent fusing

Intelligent fusing adjusts for differences in stock; runs every sheet at rated speed.

L

Inline spectrophotometer

We integrated a spectrophotometer into the iGen 150 paper path and made some pretty remarkable things automatic — things like High Definition Linearisation, Advanced Colour Profiling, Spot Colour Calibration and Colour System Check. Those, in turn, give you more accurate colour faster and more stable colour over time, PANTONE matching and a level of productivity you've never experienced.

M

660 mm stacker

A larger stacker module (up to four); two wheeled carts per stacker; allows you to take full advantage of our largest cut sheet. And DFA (Document Finishing Architecture) compatibility means you can add your choice of automated inline finishing solutions.

Electronic collation

Electronic collation with offset stack delivery.

N

Top tray

Top tray for interrupt jobs or proofs — delivered effortlessly, even with a concurrent production job underway.

Productivity times 24 — hours, that is.

iGen 150 multiplies your productivity. By how much? We like to say by 24.

Because every hour of every day, iGen 150 helps to make you more productive and more profitable. If business is a race against time and a race against the competition, iGen 150 just put you in the lead. We addressed productivity from every angle to make it, quite simply, the most productive press in the industry.

More speed. Increased automation. Greater uptime. Less waste. So every hour becomes an opportunity.

Run multiple short run jobs that meet customers' requirements in one shift.

If our years at the forefront of digital printing have taught us anything, it is that sheer speed doesn't equal productivity. But as part of a complete package, it sure does help. And iGen 150 is the complete package.

A 25 percent raw speed increase to iGen's proven productivity allows you to produce more

work faster. That means speeds of up to 137 A4 pages per minute. Even better, our 660mm sheet runs at a rated speed of 3000 sheets per hour (4 colour simplex) to yield an effective A4 rate of 150 pages per minute.

In conjunction with the processing power of a choice of print servers, a streamlined workflow, great first-print-out colour and the efficiency of a range of inline finishing options, iGen 150 produces more jobs that help you maximise your investment and grow your business faster than ever.

An expanded sheet size to capture expanded opportunities.

More up per hour. Greater efficiency. Fewer sheets. Exclusive capabilities. That's what the iGen 150 660 mm sheet size delivers. Our largest sheet means your clients will be able to include more content — on the same sheet.

But what does this large sheet size ultimately bring you? The room to grow your business by printing more economically — serving your customers more affordably and giving them what others can't.

iGen 150 sheet size: 364mm x 660mm.

But this 660 mm sheet is only useful if you can run it in production quantities.

With the optional 660 mm stacker — which is compatible with downstream inline finishing — your finishing bottlenecks are a thing of the past.

Automation of the most complex tasks.

System-wide automation — including critical colour control — eases interaction for operators with a variety of skill levels and makes everyone on your staff as productive as possible.

“Hey, if we’re going to increase our business and look towards the future for our business, we want some kind of new model... That’s the reason that we got into digital, because when we did the research, we found that’s really where the future of print and marketing is going to be, a lot of digital print.”

Buzzy Castonguay
Business Development Manager
Colour Web Printers

iGen 150 is the result of time. And experience.

The iGen 150 Press is the next generation of a revolutionary technology family. For more than a decade, Xerox has been at the forefront of the digital printing industry — with ideas that changed the way the world was able to print, innovation that brought remarkable new technologies to market and improvements that continue to make digital printing more productive and more economical every day.

And no idea is bigger than the one on which iGen 150 is built — taking a finite amount of time and making it work harder for you. It’s an idea that pays bigger and bigger dividends with every tick of the clock.

What would you do with more production time today?

Right now, you currently spend time on reprinting errors, quality control, job setup and waiting for the press. More than you need to.

With iGen 150, the time you spend on all of those is less, so you have more production time. More time printing jobs that are ready to go from the press straight into the customers’ hands. More time achieving the colour that meets every quality expectation without trial and error. More time printing and finishing larger, high-value jobs. More time entering and dominating markets that might have been previously out of reach.

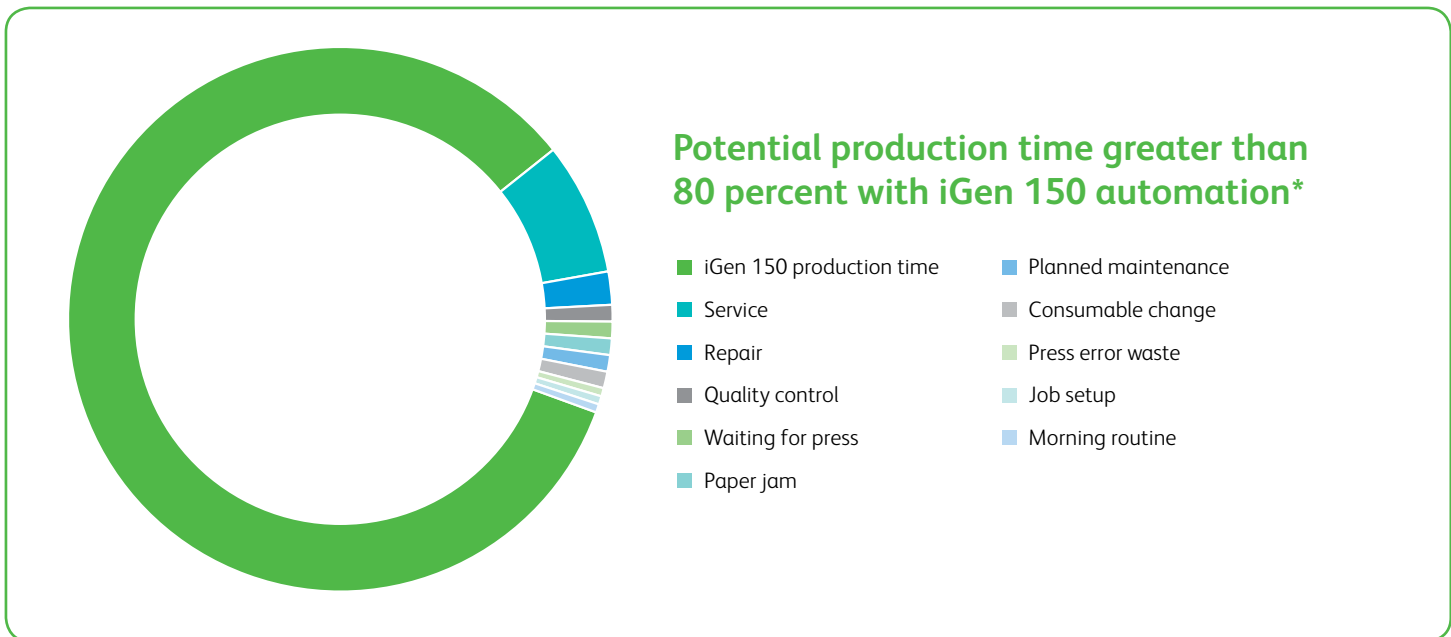

And more time to get paid more often.

What would you do with more production time this year?

Let’s expand our thinking beyond an hour and consider a week, a month...a year.

When you multiply the added productivity that iGen 150 makes possible times the number of hours in a year, it adds up to weeks if not months of available production time.

What could you do with that increase in productivity? More jobs. Greater customer satisfaction. A growing business. iGen 150 can truly revolutionise your business by enabling unprecedented efficiency and higher levels of profit.

*Based on SpenderLAB Study.

Xerox iGen 150 press specifications

Printing speed

660mm	3,000 sheets per hour (4 colour simplex)
A3	4,500 sheets per hour (4 colour simplex)
A4	8,250 sheets per hour (4 colour simplex)

Image quality

Resolution	2,400 x 2,400 dpi
Line screens	160 lpi, 180 lpi, 210 lpi, 250 lpi
Process colours	Cyan, Magenta, Yellow, Black

Paper and image format

Maximum sheet size	364 mm x 660 mm
Minimum sheet size	178 mm x 178 mm
Maximum image area	2 mm less than sheet size (1 mm border on all sides)

Paper flexibility

Paper weights (all trays)	Uncoated: 60 gsm to 350 gsm Coated: 90 gsm to 350 gsm
Paper flexibility	Coated, uncoated, textured, specialty stocks Recycled, perforated, tabs, transparencies, a wide variety of labels, synthetics, DocuCard, NeverTear, DuraPaper, UltraMagnet, DocuMagnet Mixed-stock jobs supported at rated speed No drying time Transfer overdrive

Technology features

Imaging	ICC Source and Destination and Fast Path Profiling Colour check for colour monitoring Single-point transfer printing Confident Colour Technology Colour Maintenance Tool Closed-loop controls with Inline Spectrophotometer Benchmark gamut of CMYK dry inks Load dry inks while running Automated Image on Paper Set-up
Paper handling	Mixed stocks in a single run (up to 12) Straight paper path Wide-radius inverter for second-side imaging Collated sets Wheeled stacker cart Load-while-run paper capability and unload

Input capacity

Up to six feeder modules/12 trays
Up to 12 trays
Each tray holds 254 mm (2,500 sheets 120 gsm/ Coated Text)
Any supported stock in any tray
Up to 30,000-sheet capacity or more

Customer Expectation Document (CED)

For detailed product specifications, optimum performance parameters and service clearances refer to the Customer Expectation Document.

About Fuji Xerox Australia

Fuji Xerox Australia is part of a world leading enterprise for business process and document management services. Through the implementation of efficient business processes and effective communication, we deliver the right information to the right people in the right format. A continuous source of innovation helps us optimise IT and print infrastructures to deploy document strategies that are efficient, productive and waste-free. This enables our customers to meet their business challenges in new ways with measurable results.

Delivery

Up to four stackers
Two carts per stacker
Stacker cart holds 305 mm (3,000 sheets 120 gsm/ Coated Text)
Stacker top tray
Collated offset stack delivery
Up to 12,000-sheet capacity

Optional

Inserters	One inserter module, two trays Enables the addition of specialty sheets to a job after the fusing process (embossed stocks)
Variable Information Solutions	FreeFlow Variable Information Suite, XMPie and other industry partners

Dimensions

Size	7,366 x 1,829 x 2,438 mm (L x W x H) Overall standard press dimensions iGen4 (image tower, two feeders, one stacker)
Weight	3,580 kg

Xerox FreeFlow print server

Integrated Parallel RIP technology
ICC Device Link Capability
Seamless interoperability with FreeFlow Product Suite
Adobe PostScript, PDF 1.8, PCL5, TIFF, FRF
Adobe Acrobat 9
Adobe PDF Print Engine 2.0
Job and production management GUI
Concurrent receive, RIP, print
AFP/IPDS
VDP: VIPPR, PPML, Optimised PostScript, Optimised PDF for VDP

Xerox EX Print Server powered by Fiery

Features	Fiery Graphic Arts Package Premium Edition Fiery Colour Profiler Suite v3.1 EFI SeeQuence Suite Fogra Media Wedge
Network standard interfaces	• TCP/IP, PAP, FTP Printing, IPP, LPR/LPD • SMB print sharing (over TCP/IP)
File support	• Adobe PostScript, PDF 1.9 • PCL, TIFF, JPEG • Adobe Acrobat 10 • Adobe PDF Print Engine 2.0 • Adobe PDF/VT 1.0 • VDP: VIPP, VPS, PPML v2.2, EFI FreeForm 1 & 2 • Fiery JDF v1.1

Protecting the environment is fundamental to our commitment to corporate citizenship. Fuji Xerox Australia provides products that have been designed with both our customers and the environment in mind. We are known for our end-of-life product resource recovery and remanufacturing programs. Our products regularly lead the industry in energy performance and all our sites maintain ISO 14001:2004 Environmental Management System Certification. Fuji Xerox Australia has been recognised for its achievements in environmental sustainability by the United Nations and the Banksia Environmental Foundation in Australia.
